The Canon logo is embroidered on the top flap. There are two versions of the EDSDK compatible with Windows or Macintosh. EOS M and EOS R Full Frame mirrorless ranges deliver the power of DSLR in the body of a compact camera. Register your product and opt in for exclusive offers and discounts. That's the setting next to L, one or two down from ISO 100. Even with the menu option set to disable noise reduction, the 5D Mark II still uses it. I don't use this in good light because I can't shoot at any slower than at ISO 200 with it ON, and ISO 200 gives visible noise in the shadows. The LEICA M9 can't do this! If you look at your images at 100%, you'll see that the lower resolution shots are sharper pixel by pixel! They are much, much sharper and cleaner than images from cameras on which that is their native resolution. When you start with over 20MP, it looks pretty good if you use all those to make 11MP or 5MP. No digital camera really resolves its rated resolution; they cheat and interpolate up, so at 100% at its rated resolution, no digital camera image is as sharp as a true scan from film. If Sigma was selling this, they'd sell the 5MP S setting as if it were 15MP also a lie. The S 5MP setting of the 5D Mark II is a lot sharper than any 5MP camera.

For instance, the 11MP setting of the 5D Mark II has way more detail than any of the 12MP native Nikon cameras. The camera focuses, and locks as soon as it gets focus. You then may recompose. Otherwise, the 5D Mark II will keep trying to pull focus control away from you. It never stops; it always tracks your subject in and out. This clever setting usually selects whichever of the two settings above is appropriate, and uses it. In most cases, the 5D Mark II will keep trying to focus in AI FOCUS unless you're on a tripod. You never have to click around to get where you want. On Nikon, you'd have to click right twice. Want the bottom sensor. Just click down from wherever you are. Push the top right button on the back of the 5D Mark II; no menus required for any of this. If the other sensors aren't doing well in dim light, choose the center sensor and you'll be much happier. If you need more details about what you're setting, press the SET button again, but it's not necessary. The instant you've changed something, it's done. For manual exposure, look at the bar graph in the finder or on the old top LCD. To make this INFO screen go away, you have to press INFO again. You won't erase what you saved. These changes will stay until the camera times out, usually one minute you can change that duration in the menus, and the next time you go to shoot, even if you had changed something, you're back at your saved settings. Everything is saved. This recalls the setting. This is what I saved that changes for me from setting to setting. It is off by default. You set it by pressing Everything stays the same, except that blownout highlights might not blowout, but only if you're lucky. This example is the one time it actually did. It only pulls in about one more stop, and when you've lost a highlight, it usually is either further overexposed than that, or it's OK without any of these shenanigans. You can't shoot at ISO 50 or ISO 100; with highlight recovery ON, it starts at ISO 200.

You can choose the Picture Style set for Live View to adjust sharpness, contrast, color saturation and white balance. If the finder suddenly seems weird, reset the little dial on the top right of the eyecup. I put this item in the MY MENU menu. You can't name them. Sadly, unlike Canon's point-and-shoots, there is no option for having new, dated, folders automatically created for you each day. Again, the

Powershot and EOS teams need to have sake together more often. About 26 lenses are preloaded. If you run out of your 40 maximum, uncheck some of the lenses Canon had checked as default. No, I have no idea why this isnt presintalled at the factory as it ought to be. Dont use tilted flat targets, since the actual location of the AF sensors is never really exactly where they are marked in the finder. Every shot varies a little from shot to shot; no AF system gives the same result for each shot. Make at least 5 shots at every distance, and try every distance, since the settings can vary by distance. Its great people like you who allow me to keep adding to this site fulltime. Thanks! It costs you nothing and is a huge help to me.I recommend them all personally. The 13digit and 10digit formats both work. Please try again.Please try again.Portable and easy to understand, the book shows you how to get the exact show you want, when you want them, and is packed with more than 200 beautiful color photos. G.B. 3.0 out of 5 stars There are other, much better books on the market that offer, not only explanations, but personal insight on getting the best photographs from this camera. Having said the above, this is written in a softer, a little more user friendly, than Canons manuals, which can be somewhat technical, but again, if youre looking for insight and not just function, look around.The small booklet that comes with the camera gives complete and accurate information on all features. There are too many obvious errors, also.

I found only a few useful insights though most 5D owners already know in the book. If you are looking to find accurate and useful information beyond the owners manual, you may be disappointed.I keep it near to refresh the options when I go out to do something special.Overall a good guide for the 5D mk II.Even if, like me, youve had one for years there will be hundreds of little features that are seldom if ever used. I would say the 5D mark II comes with a pretty good instruction manual from Canon but it is a little dry and it assumes you know a great deal already. This book is better than that. McLernon leads you through all the cameras features and he assumes you know nothing. I had got into something of a rut with my camera Av mode for natural light and manual mode for flash but I knew that with a little help I could easily stretch myself by getting more from my camera. This book has helped me to do that and Im happy to recommend it.Sorry, we failed to record your vote. Please try again The 5D Mkii contains many unique features that even experienced photographers will miss out on if some quality time isnt spent learning about them. I spent a long time researching the alternatives for this book and actually for a previous model of

Canon camera, I had some first hand experience of some of these. Frankly they all amount to being reconstructed versions of the Canon manual. Well why wouldn't they be. The key difference should be that they add some extra value in terms of the voice of the author as an experienced and resourceful photographer providing tips and creative ideas that build on the manual not simply regurgitate its contents in a different style. This book definitely adds this value. It also contains some interesting narratives about different genres of photography that may or may not be of use to all readers but each narrative contains some real gems.

Personally, I felt that this last section could have been dispensed with in favour of some more discussion about how this amazing camera can be put to use. For that reason only, I felt four stars were more appropriate than 5. Sorry, we failed to record your vote. Please try again I had previously owned a 40D and a 550D. With the 40D I stuck with the book that came with the camera. There were two things that helped me and they also apply to the book covering the 5D mk2. My handbook that was supplied by Canon quickly came apart and the pages started dropping out. And secondly, the text is small, compact and the illustrations are poor. The manufacturer's book does cover all you need but it is not half as friendly as the book I'm reviewing. The book has a nice presentation. The writer is friendly and encouraging. The language is accessible. It's a nice book to handle and being high quality paper it is OK to take on your travels. It is not as small as the book that came with the camera, but as it is falling apart just like the others I've had it is not much use on the road. Having spent 1000 on a body and lost on glassware to stick on the front I don't think 10 for a book is going to make much difference to my bank account. It is worth their money, and when you are up to speed, trade it in on Amazon. Sorry, we failed to record your vote. Please try again Assumes a lot of preexisting knowledge of the Canon family and of jargon. Takes a lot of navigating to find desired basic information; talks about exciting features without describing how to access them. Sorry, we failed to record your vote. Please try again David Busch's books are much more in depth. Sorry, we failed to record your vote. Please try again This one seems to exceed all my expectations; I keep referring to it, sometimes to clarify a point, and others just because I can pick it up and lose myself for a few moments. This has really helped me to understand the great, new features of this tremendous camera.

Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again However, it is not very useful as a field guide as it is too big to take with you. Sorry, we failed to record your vote. Please try again It covers a full range of subjects and takes you into new areas. Recommended for aspiring Canon 5D Mk 11 users Alan Sorry, we failed to record your vote. Please try again Immaculate inside. Found it very useful already. Sorry, we failed to record your vote. Please try again Excellent and required reading for those new to the Canon EOS 5D mark ii Sorry, we failed to record your vote. Please try again In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Unlike any previous full frame sensor camera, the 5D was the first with a compact body i.e. not having an integral vertical grip and has since then proved to be very popular, perhaps because if you wanted a full frame DSLR to use with your Canon lenses and you didn't want the chunky EOS 1D style body then the EOS 5D has been your only choice. Three years on and two competitors have turned up in the shape of the Nikon D700 and Sony DSLR A900, and Canon clearly believes it's time for a refresh. In other words, a camera that aims to leapfrog both its direct rivals, either in terms of resolution in the case of the D700 or features in the case of the DSLR A900. Full detail below. I've shot a lot with a 50mm lens. I've shot commercials and travel videos with it, but I want to change cameras after using it for this long. It's an incredible camera, but there are certain things about it I'd change to make it ideal for the material I wish to continue shooting and I would appreciate any advice you have on what might be a more ideal camera for what I'm continuing to work on. 1.

FOCUS I love the depth of field the 5D brings, especially for rack focus shots but I run into issues

when I'm moving the camera or a subject is changing distance. So looking for something that still creates DOP but will allow auto focus while moving. 2. STABILIZATION Movement with the camera creates very unstable shots and I have used the ronin and glide cams, but would like something that doesn't have as much shake. Like 0 Dec 6, 2017 [permalink KyleS5](#) Ran out space with the first post. 3. PHOTOS I do like the ability to take photos, but I'm not married to a camera that has the capability of both photo and video. It's compact and easy to bring with anywhere. So it would be nice to have a camera that gives me that kind of feature and something that has a strong battery life. Would appreciate any suggestions you have and feel free to ask me any questions if you'd like more information on my usage of a camera. Really appreciate the reviews you post for the camera junkie and film making community Like 0 Dec 6, 2017 [permalink LunasUniverse](#) what would you say is a fair price to purchase this camera second hand, and how many cycles would you say are acceptable. Like 0 Dec 20, 2015 [permalink Cameracist](#) Less than half the rated durability should be OK. Like 0 Nov 28, 2016 [permalink D135ima](#) Great Camera. Like 0 Aug 13, 2015 [permalink BobFoster](#) I work in NYC as a fashion photographer and I have to say the the 5d series are the most used cameras out side of medium format cameras. I've been shooting with the mark 3 for over a year after shooting with the mark 2 for 2 years great both great cameras. You can see the shots I've taken with it for my work on my website www.brianschutzaphotography.com hope it helps!! also note I only shoot RAW format. Like 1 Dec 17, 2014 [permalink EcoPix](#) Was it really 2009. I'm still in the first flush of my love affair with this camera. And I'm still fathoming the depths of its capability.

Okay, she's got a lot of paint missing these days, but the images are still magic. Whenever I use another camera, I sigh and wonder why I didn't use the 5D2. A brief history of photography silver chemistry flexible roll film Kodachrome Velvia 5D Mark 2. Like 0 Dec 16, 2014 [permalink reanim888](#) As I know when the original 5D debuted three years ago, it wasn't clear why most enthusiasts would want such a camera. Though it captured excellent, high resolution images, it was slower and bigger and more expensive. Today the market has changed significantly, and it's clear that the market is ready for fullframe digital SLRs that can turn out high image quality. High quality is one thing, but being a camera that can deliver high quality over a wide range of lighting conditions and different ISO settings is what makes the Canon 5D Mark II such a compelling choice, and a clear Dave's Pick. It's really very very good. Like 1 Nov 1, 2014 [permalink jme723](#) 6D or the 5D Mark II. Like 1 Oct 30, 2015 [permalink His love of photography](#) began when he borrowed a friend's superzoom, and eventually invested in a DSLR system. His home on the east coast of Australia provides plenty of spectacular scenery, but he's eager to travel and grow as a photographer. See gallery 40 Canon updates Digital Photo Professional to version 4.1.50 Dec 17, 2014 at 2302 Canon has updated its Digital Photo Professional 4 DPP software to version 4.1.50. The update brings support for a couple of new lenses and several camera models, improvements to multiple functions, and compatibility with 64bit native environments, among other things. The newest version, says Canon, incorporates feedback from both APSC and older fullframe owners eager for the very latest Raw workflow solution.

Read more 3 Documentary photographer turns to video for The Long Night video Dec 2, 2014 at 1830 A multimedia journalist by trade, Tim Matsui's still photography projects have taken him from native Alaskan villages to Brazilian Air Force training facilities. Matsui shares with us his journey in creating his latest documentary work, from its beginnings in still photography to the adaptations he made to turn it into a video production. Learn more about his work on The Long Night, a documentary debuting this week that looks into human trafficking in Seattle. Asking the very same question, photographer Thom Atkinson posed it figuratively to centuries of British soldiers. He's assembled what would have been the belongings and clothing of a dozen combatants, ranging from medieval to modern day soldiers. He hopes his photos will inspire others to see sharks in a light unlike their typical portrayal in movies and pop culture. Find out about his process and see his work.
