Engineered with exclusive Bose Unify technology, this system uses easytofollow onscreen messages to guide you through the setup process. It even verifies when youve made the correct connections. Enjoy up to 6 HD video and audio sourcessuch as your Bluray Disc player, cable box and gaming system. And now, its designed to let you enjoy the experience more easily than ever before. It even verifies when youve made the correct connections. Simplicity of setup and programming through the Unify Intelligent Integration System and LCD remote. Easy to Set Up. Easy to Use. The Lifestyle V25 system features the new Unify Intelligent Integration System to walk you through system setup, step by step. As youre attaching components to the control console, the system recommends the best connectors via onscreen messages. It even confirms that the connection was made properly. Each connected device is automatically added to the source menu accessed on your TV screen. No more toggling through video inputs to find the right source. This makes it easy and intuitive for anyone to use the Unify system. Unify technology also simplifies programming your Bose remote to control your Lifestyle system and most anything attached to it.

During setup, the Unify system references an internal database to identify each connected component, and automatically teaches the Bose remote to control it. And Once Youre Set Up. They produce a level of sound that adds impact and realism to your entertainment. That sound is aided by an Acoustimass module that can be placed in a corner or out of view. Exclusive technology in the module helps provide the emotional intensity you feel at the theater or in a concert hall. Even hidden out of sight, its impact cant be missed. Sound Designed for Your Room Your room is unique, with size, shape, textures and other elements affecting the sound you hear. In addition, builtin Bose link technology can distribute the home theater systems audio to as many as four additional areas. Add compatible Bose products to enjoy music almost anywhere, even outdoors. Key Features Quality multi speaker Bose system 5speaker surround sound system designed for use with your home entertainment components. Unify intelligent integration system uses onscreen navigation to simplify system setup and everyday use. This proprietary technology walks you through setup, showing the right inputs and best connection options, and even verifies youve done it correctly. Clear, onscreen menus provide all the information you need for your connected sources. ADAPTiQ audio calibration system provides greater freedom of speaker placement. It analyzes the way your rooms dimensions and other variables affect sound, then automatically adjusts the sound of your Lifestyle surround sound system to the acoustics of your room. Up to 6 HD sources, including 4 HDMI and 2 audio HD sources. Bose remote features fewer buttons and an LED screen to simplify management of your entertainment sources. Works on radio frequency to operate through walls and floors. It charges your iPod while docked, and your Bose remote can control your iPod content. You can also play its video content on your HDTV.

Acoustimass module works in concert with the small speakers to deliver a fuller range of theater sound and effects. The patented Bose design produces low frequencies for all channels with no audible distortion. Automatic video upscaling ensures movies and sports use the highest resolution capabilities of your display up to 1080p over HDMI. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Major 4.0 out of 5 stars I personally own a surround sound that I pieced each part separately. My speakers are big, bulky and for the same price my system is better than this Bose. But that's not the point of BOSE. I bought this for my dad. Not a tech savvy guy AT ALL. Loses 1 star because the price. The Bose system is much better and has excellent sound. I also bought the SL2 surround link so I wouldn't have to have wires for my rear speakers; this is a great feature and I would highly recommend it. Before buying the system, I read many reviews, read all the Bose online information and called Bose. I verified that the only difference between the V25 and the V35 is the physical size of the speakers. So, if you're considering the Bose lifestyle, don't waste time looking at the V35 system unless you've got more money than you know what to do with. However, where you could spend that money you saved on a V35 might be for a preamp, for a turntable. I still have a very nice turntable and many vinyls, which I want to use through my Bose. You can't connect a turntable to your Bose system without a preamp; so, you have to call Bose and order one through them. Just thought I'd point this out because it was not obvious to me when I bought the system. I only realized it when I tried to hook it up.

<http://precisionheavyhaul.com/images/car-key-spy-camera-user-manual.pdf>

I'm an engineer, with a strong electronics background; however, it took me about 4 hours. I should add that I had to put together front speaker stands and rear speaker bookshelf stands, which did take extra time. It also takes time to undo your existing system and rerun cables, etc. Then there's running the Adaptiq, and adding each component. And, you need time to try various positions for the reflective speakers so you can get the best sound. So, plan on a whole afternoon or evening. As for setup, I quickly ran out of inputs on the Bose system 5 on the back. Probably because I have some older components I want to use, such as a VCR and CD changer. So, if you use a digital optical cable from your TV to your Bose, you can overcome the limitation. For instance, I hooked my VCR straight to my TV, and I hooked my DVD player straight to my TV. You only have to select the correct input on your TV for whatever component you want to use. As for the Bose remote, I don't use it. It will not work correctly with older components, and even with some newer ones. You use the setup process with the Bose, and it is supposed to figure out what your component is, and how to control it, by you pressing various buttons on your old remote in response to the Bose setup guide. It usually gets the basic ones such as volume, power and channel, but not always the others. Would be nice if you could just input your specific component and the Bose would know how to control it, but it doesn't work that way. So, I continue to use my Logitech Harmony One remote, which works great and controls all my components as well as the Bose. So, you might want to consider this if you have any older components, or you want a remote that will truly control everything. The Bose surround works great, and the rear speakers are picking up much more than my old system did. Also, I can turn it up to earsplitting and there's no distortion. Overall, an excellent system and I'm very happy with it. I highly recommend it.

<http://erka-techserv.com/images/car-jerks-when-accelerating-manual.pdf>

I wish it was offered in white black is the only option. It is expensive when compared to other systems, but we have always had good luck with Bose products. I wish that the remote worked better with the Apple TV. I still have to use the Apple remote to turn on the Apple TV. The Bose remote won't turn it on. The Bose remote does turn on all of my other components. Have listened to system in stores many times over the last few years. Figured the store setups optimized the sound

and it would never work in real life. Boy was I wrong. Cant say enough about the sound, ease of use and overall value. Setup was so simple. On screen step by step instructions for every device I added. Have connected to it, TV, Cable Box, Home Network streaming device, BluRay 3d player, CD Changer, and IPOD. The Bose remote works all of the devices when selected. So glad I finally made the purchase. It is not the first Bose we have had this problem with. Thought they would have fixed that by now. Otherwise, I just love Bose products great sound. Please try again. Please try again. To get the loudness and intensity of the sound it produces one would have to stack up several large speakers of other brands. You can literally hide the speakers and yet be immersed in sound from all sides. Easy to program and use as it serves as a wellfunctioning receiver as well. My 535 has my Roku, bluray player, Ipod and wireless transmitter for my projector Epson 5030 UBe connected to it. with ports to spare to connect my computer if I want to. The sound of course is as it should be its a treat to listen to anything play through it. music plays beautifully and the for movies like being in a movie theater. I am very pleased with the bose system. I have been buying stereo equipment for my home and car for over 20 years and this is my first bose purchase other than headphones. First off, its extremely easy to set up. It learned all of my remotes with the exception of my Dish remote. Another plus with the bose system is the customer service. I called at an odd time, waited less than 5 minutes, and within 10 minutes my remote was programmed. Yes, I could have paid half what I paid to

put together a system that sounded just as good. However, I could not have gotten a system that was as easy to install, superior customer service, or build quality as the Bose system. It just works and works well. I really hesitated to purchase this due to the cost, at the end of the day I thought about how long I will own the system and went ahead. I am glad I did. Will return the system and get something else that is more reliable. No issues after the service and drop in sound or images after getting it repaired. Knocking out 1 star as Bose doesn't know what the underlying cause was and no explanation. Verdict Get the system you won't be disappointed with the performance. I am happy to drop my idea of going with Sonos as there is no comparison if you are a serious music lover. Sorry, we failed to record your vote. Please try again. If this is the case, this article is for you. There are many places to find both diagrams on the internet, but which is the best? You can find a diagram in 2 manners. You can either download a free Fishbone Diagram or use your favorite search engine to search for your error tree diagram. These two types of diagrams are extremely similar in many ways. Both will show you an overview of a construction and the forces which shape that structure. The biggest difference between the two diagrams is that the Fishbone Diagram will probably be of more interest to the person looking at it compared to a Fault Tree diagram. By definition, a Fishbone diagram is a diagram showing the connection between a shape and the underlying structure and this relationship is much more detailed than that which you could find with a fault tree structure. If you're looking for a more comprehensive explanation of how a construction grows over time, then this particular diagram type is best for you. Another major difference between the two diagrams is the significance you will find with each diagram. A Fishbone diagram shows a pie graph. Its columns are for the form and rows are for the structural components which encircle that shape. FFT diagrams have circles rather than pies. By far the most common gap between the two diagrams is in their use of colors. A Fishbone diagram utilizes pink, green, and yellow while a FFT diagram uses blue, red, and purple. With that being said, both diagrams are very good for a visual comparison of this arrangement you are studying. In my view, the ideal way to use a Fishbone diagram is to locate an example of a common automobile and see whether the vehicle you are taking a look at fits to the form that you see in the diagram. This can allow you to know what is happening in the car. It is also helpful to discover a FFT diagram because it can be used to compare different cars.

You may discover a number of examples of automobiles and other objects online that have been examined using both diagram types. Page 3 Important Safety Instructions.
