brother sewing machine ls 2725 manual

Always unplug this sewing machine from the electrical outlet immediately after using and before cleaning. IMPORTANT If the available socket outlet is not suitable for the plug supplied with this equipment, it should be cut off and an appropriate three pin plug fitted. SNAPON TYPE Turn power switch to "O". 1. Raise the needle to its highest position by turning the balance wheel toward you counterclockwise, and raise the presser foot lever. To change your machine to the freearm style, lift up on the extension table and pull it out. 1 Lift the bottom of the extension table up toward you. 2 Pull the extension table out to remove it. To sew forward, release the reverse sewing lever. With your right hand, turn the balance wheel toward you counterclockwise until the needle moves down and back up again to its highest position. You can use the same color or two different colors of thread for decorative stitches. Twin needle sewing works well with these stitches the Straight Stitch 610 and the Zigzag Stitch 2. Puede usar el mismo color de hilo o dos hilos de colores distintos para puntadas decorativas. It may need to be adjusted when you change fabric or thread type. NOTE It is recommended that a test sample be made on a fabric scrap before sewing on your project. The basic thread tension setting is "5". For most sewing applications, no adjustment is needed. When sewing with thin thread on thin fabrics, the thread tension may not be adjusted adequately with the upper tension control dial. Starting Sewing fig. A 1. Set the pattern selection dial to the appropriate Straight Stitch 6 or 7 with the desired length. 2. It is recommended to sew using the Straight Stitch at the beginning and end of the Zigzag Stitches. Each is explained below. Set the pattern selection dial to 10. MENDING 1. Place the reinforcement fabric under the tear to be mended. 2. When sewing the right side of the zipper, attach the shank to the left pin of the zipper foot. Remove any accumulated lint and thread with a brush from the retaining ring, hook, driver and race body. 2. A cloth dampened with machine oil should be used to wipe the shuttle race clean of lint. Page 22 Damaged or worn needle is used. Page 6 Thread is tangled. Pages 1217 Darning plate is installed. It may be necessary to reship the sewing machine. Improper packing or improper packing material could result in damage during shipping. Instructions for repacking the machine are illustrated below. Try our troubleshooting guides and machine manuals below, which offer solutions to the most common issues. If you're still stuck, view our extensive list of FAQs at the Brother Solutions Centre. Our support app is only a click away, so download today. If it has, raise the feed to ensure the fabric will move forward. Computerised machines will remind you to do this. This will switch the machine back to Rethread the machine following the threading instructions in your machine's instruction manual. You will also find instructions for your machine online via the Brother solutions centre Note We find that Butterfly and Singer Branded needles are often not compatible with Brother sewing machines and may cause issues with your machine not picking up lower thread. We would recommend using either Organ or Schmetz branded needles. Rethread the machine following the instructions in your manual and ensure that the foot is raised. If there is tension when pulling the thread, then the thread may be unsuitable for machine sewing and should be replaced with machine sewing thread from a reputable brand. It's possible there be a timing issue

with your machine. Contact your Brother dealer to arrange a service or contact our customer service team. Make sure the presser foot is lifted before threading the machine. Set your bobbin correctly into the machine. For top loading bobbins, the thread needs to be going around the bobbin in an anticlockwise

direction. <http://www.bluwash.co.kr/userfiles/daihatsu-cuore-2000-service-manual-pdf.xml>

Use the guides on your machine or refer to your instruction manual. If you have a mechanical machine, check that the foot is lowered before sewing. Computerised machines will remind you to do this. Using thread that does not pull through smoothly can cause thread breakages, poor stitching or damage to your machine. For best results, you should use a good quality, branded thread. The thread should pull through the machine with no tightness. To find out more or to opt out, please check our Cookie Policy. For further information check our Privacy Policy. A couple of small criticisms the instructions are not very clear at all, to the point where it took me over an hour to thread the bobbin the 1st time because the pictures bearing in mind this is not the first time have threaded a machine. Also, so far I have found it difficult to find a middle ground on the pedal so it seems to be either on and fast, or off. It seems to be hard to have it running but at a slower pace. Perhaps this will come with more use but not from the times I've used it. Overall well worth buying. Reviewed in the United Kingdom on 16 June 2015 I have bought this sewing machine last July. The timing has been wrong since it arrived. I have managed somehow to get the bobbin to hook up with the needle after messing about with it for hours. This happens every time I put a new bobbin on.

Brother hasn't given any instructions in the manual on how to adjust the timing. Cannot find anything good enough to fix this problem which is quite common with this model. I don't use it very much, but if I had to use it more often I would have bought a better model. The lamp is a joke, it lasted about a day or less. Bought a new one yesterday and fitted it, it lasted only 5 hours. The machine itself is not bad to use except for the odd glitch. Maybe I have been unlucky, but Brother should have mentioned the timing problems. I do not want to call a technician for this kind of problem and a technical diagram should have been made available at the back of the manual or on the web. Please try again later. It has a range of straight and zig zag stitches, a buttonhole maker and comes with plenty of empty bobbins, 3 different feet, a screwdriver. Christocalena 4.0 out of 5 stars However, some things are not perfect, e.g. the cover for the bobbin machinery has snapped off at the fixing and now falls off so I leave it off altogether. Also, it seems to snap the thread at inopportune moments which can be very irritating if you are in the middle of a tricky piece of sewing. The bobbin casing has come apart several times and I am now expert at refitting it. Apart from that, it is easy to

use and solidly built. Please try again later. Please try again later. Please try again later. Please try again later. Mr. Mj Buttermiles 5.0 out of 5 stars This was the original model that I was looking at, so not a problem. My wife and I spent 2 hours going through setting it up to make sure it works, before wrapping for xmas present for our younger daughter. Then on xmas day we discovered the daughter has set it up within a few minutes as she had learnt this at school. She has produced various items from pillow to little bags and loves it. Great as a starter machine. Please try again later. Please try again later. Val P 5.0 out of 5 stars This machine is light but sturdy. The pedal is great, really manageable.

I had read so many reports on other machines about the control with the pedal but this is very good. Service was great it arrived before estimated date. I love it! Please try again later. Please try again later. peter 2.0 out of 5 stars Ok a few months on its not getting used much the tension setting for the thread does not seem to be working properly and the side of the casing is starting to melt from the bulb inside the machine that to be honest is not being used for more than half an hour. Threading the machine is a very straightforward process, but there are quite a few steps you'll need to follow if you want the job done right. Pull the spool pin up so that it is completely vertical. Sit the spool of thread on this pin. Pass the tail end of the thread through the top hole of the empty bobbin. The tail of the thread should end up on the outside of the bobbin. Do not pass it through the bottom hole. Place the bobbin onto the winding shaft, then slide the shaft to the right. After a slight rotation, you should see the spring on the bobbin winding shaft click into the slit along the side of the bobbin. Lightly tap your foot on the foot controller of the machine. Allow the thread to wind around the bobbin a few times. Do not wait until the bobbin is full before releasing the controller. Once the thread is secure on the bobbin, trim the tail coming out from the top hole. Step on the presser foot again to finish winding the bobbin. The wheel will turn during this time, and you should not disturb or attempt to stop it.

Once the machine stops, cut the thread connecting the bobbin to the rest of the spool. The thread on the finished bobbin should look tight and even. Open the shuttle cover to reveal the bobbin case. Pull on the bobbin case latch, pulling the case straight out through the front of the machine. Slip the loaded bobbin into the bobbin case so that the thread comes up from beneath the bobbin. When viewed from the front, the thread should appear to wind around the bobbin in a clockwise rotation. If the bobbin is loaded in the wrong direction, the thread tension will be incorrect and you may end up breaking the machine needle as you attempt to sew. Pull the tail of the bobbin thread through the slit at the top of the case. Draw it down and to the left, working it into the delivery eye. Hold the bobbin case by the latch and slip it into the shuttle race of the machine. Release the latch once the bobbin case is in place. It will fall out if placed improperly or insecurely. If you have not done so already, lift the presser foot lifter up, releasing the presser foot and bringing it to its highest position. If necessary, you should also turn the balance wheel at the side of the machine toward you in a counterclockwise rotation. Continue turning the wheel until the thread takeup lever at the front of the machine is in its highest position. Lift the spool pin to its vertical position and rest the spool of thread on it. Pull the thread from the spool, drawing it through the rear thread guide at the top of the machine, followed by the front thread guide at the top of the machine. Simply slip the thread into the gap of the guide. Slide the thread through that notch. Slip the thread down into the right channel at the front of the machine. The thread should pass from right to left, picking up the thread check

spring and slipping into the thread tension discs behind the dial. Gently tug on both sides to make sure that the thread is firmly in place.

Draw the thread up through the left channel at the front of your machine. Bring it all the way to the back of the channel, then slip it into the eyelet of the thread takeup lever peeking out from inside the channel. Slip the thread down and position it behind the wire thread guide just above the needle. Insert the thread into the needle. Bring the thread through the front of the eye and out through the back. Position this tail behind the needle, pointing toward the back of the machine. If the two are not already in their highest positions, take a moment to make sure that both the presser foot and needle are as high as possible. Turn the balance wheel toward yourself again in a full rotation. The needle should move all the way down and all the way back up. Keep the thread taut, but do not put pressure on the needle. Gently tug on the thread inserted through your needle. Continue tugging until the thread looped around it pops up enough for you to grab it. If you cannot grab it with your fingers, use a small screwdriver, pencil, or similar object to draw the loop out. Pull on both pieces of thread until you have tails measuring roughly 6 inches 15 cm long. Let both of these tails hang off from the back of the sewing machine. If that doesn't fix it, and when you've done everything your manual suggests, take it to a sewing machine repair shop. Press down with pressure with your thumb, with your four fingers press outward at the same time and pull out.
