Does anybody has Burmester speakers. This will be a great resource for both existing owners, as well as those who would just like to know more about the Burmester Line. Prices shown are last years US retail. Now that would be interesting! Detailed Burmester info can be hard to find. I wonder if they would marry well together. Sounds living room worthy.D Sent from my DROIDX using A.Aficionado I agree with others here that Burmester has made finding product information way too difficult even for existing models. One slight suggestion is to perhaps checkout what another forum has done for Meridian products. Again, thanks so much for doing this a tech geek like me thanks you! Jeff I agree with others here that Burmester has made finding product information way too difficult even for existing models. Again, thanks so much for doing this a tech geek like me thanks you. Jeff Thanks, Ill do my best; although Im limited by the restrictions of running on vBulletin.o Thanks Ivan. Thanks, Pedro Thanks, Pedro There is no European price list. It is set by the distributor in each country where a distributor is present. There is a distributor for Portugal, Im sure they must have one. If you are trying to compare prices to other EU countries, some dealers do show the prices. Ill have a meeting with the Portuguese distributor along this week or the next. Its the same company that distributes Dynaudio so plenty to talk about. Can you PM a link to one of those price lists in Euros. Tried to google it unsuccessfully.

www.hifiengine.com

Any info on speaker prices Pedro Ill have a meeting with the Portuguese distributor along this week or the next. Tried to google it unsuccessfully. You misunderstood, I have never seen a price list published. Except for Masterlu, who has bravely gone where no one else has before. What I have seen is some dealers advertising certain Burmester items and listing the price. Let me know a couple of models you are interested in, and Ill see what I can find for you. I am guessing you want to check the distributor is being reasonable. Prices certainly can vary a lot from country to country. But I think Burmester is pretty consistent, unlike someone like, say, Gryphon, which can be all over the place. The price list in euros was posted following my request on this thread. Check above. Pedro. I am sure your advanced preparations will serve you well. And that your distributor also handles speakers you are interested in can be very valuable. I came to Burmester via the distributor of the speakers I wanted. Zebrane CeneoPunkty mozesz wymieniac na nagrody rzeczowe. Chcesz wiedziec wiecejOferta kierowana jest do klientow zamoznych, ale jednak prawdziwych audiofilow, dla ktorych jakosc w szerokim rozumieniu tego slowa jest najwazniejsza. Na jakosc produktow Burmester sklada sie zarowno luksusowe wykonanie w charakterystycznym, eleganckim stylu, nakierowanym na wyrafinowane gusta. Wykonanie luksusowe oznacza zarowno szykowny wyglad jak tez wyjatkowa jakosc wykonania i dobor materialow. Produkty Burmester charakteryzuje niespotykana dbalosc o detal. Sprzet tej marki jest latwo rozpoznawalny. Charakterystyczne linie w polaczeniu z lustrzanym polyskiem chromu na calej powierzchni obudowy od lat tworza wizerunek tej marki. Bardzo istotna skladowa jakosci marki Burmester jest to, ze wszystkie urzadzenia produkowane sa recznie w Berlinie przez wysoko wykwalifikowany personel. Czesci uzyte do montazu rowniez pochodza wylacznie od niemieckich producentow.

<http://germanbandhsv.com/images/boss-dr-660-manual-download.pdf>

Większość modułów elektronicznych Burmester wytwarza we własnym zakresie, korzystając wyłącznie z mikropodzespołów najlepszych światowych producentów i dodatkowo je selekcjonując. Każdy egzemplarz po wyprodukowaniu, a przed wysłaniem do klienta, przechodzi drobiazgową kontrolę jakości, której procedura obejmuje aż 300 różnych pomiarów, co jest absolutnym ewenementem. Podstawa jest jednak mimo wszystko jakość dźwięku. Urządzenia marki Burmester zapewniają najwyższy poziom jakości w wybranym przedziale cenowym, jednocześnie zachowując maksymalną neutralność, wynikającą z całkowitego braku podbarwień dźwięku. Burmester jest największym producentem audio na rodzimym rynku, jednocześnie będąc w pierwszej trójce firm o największych obrotach handlowych, uwzględniając wszystkich światowych producentów na rynku niemieckich. Firma ma spore osiągnięcia i zdobyła renomę na całym świecie, odbierając już setki nagród. Burmester jest pierwszą firmą, która zastosowała w swoich odtwarzaczach napęd paskowy i pierwszą, która wprowadziła zbalansowany tor do swoich urządzeń. Burmester jako pierwszy opracował i opatentował regulowany kondycjoner sieciowy, aktywnie tłumiący zakłócenia sieci energetycznej. Również jako pierwszy stworzył przedwzmacniacz gramofonowy z samokalibracją, a także głośnik AMT, który zastosowano w kolumnach B100. Oprócz klasycznej oferty rynku domowego audio, produkty Burmester montowane są w samochodach Bugatti i Porsche jako pełne systemy nagłośnieniowe. Oferta podzielona jest na kilka serii od podstawowej Rondo, poprzez Classic, Top Line i Reference. Elementy podstawowej serii Rondo dostępne są w cenach od kilkunastu tysięcy złotych za element, natomiast ceny urządzeń serii Reference przekraczają 100.000 zł za każdy z komponentów. Najdroższe są topowe kolumny B100, osiągając cenę 215.900 zł za parę.

Kolumna podłogowa Burmester B50 Warunki gwarancji Sprzęt marki Burmester objęty jest 2letnią gwarancją, realizowaną w systemie doortodoor przez autoryzowany centralny serwis. pamięci Twojego urządzenia. Więcej w Polityce Plików Cookies. Externally, the form of our latest flagship speaker was inspired by the aerodynamic design similar to the riveted wings found on large classic airplanes of the past. Internally, we developed the B100 using the latest technological advances and measuring techniques of the highest calibre which can detect and remove even the slightest error. To be able to reproduce the time-honoured high dynamics that result in lifelike quality sound was of paramount importance during the development process while making the B100. The result speaks for itself, the B100 is a gracefully designed loudspeaker despite its size that can easily be integrated into any living room surroundings while at the same time divulge great music that can satisfy even the most critical of listeners. 2 The B100 is a three-way full-range loudspeaker with built-in phase-ridge passive crossovers using filters of the highest degree. The bass, midrange and high frequency drivers are arranged in a d'Appolito configuration.

serendipityorlando.com/wp-content/plugins/formcraft/file-upload/server/content/files/1626c69529709e---canadian-steel-manual.pdf

The cabinet of the B100 is double-walled to add solidness and strength. DESIGN GOALS AND CONSTRUCTION FEATURES The construction of the B100 is designed to capture the true essence of music as nature has intended. Even at high volume and a gale-like force of over 115dB the ca. 128kg structure of the B100 is not even fazed. This can be made possible thanks to its highly sophisticated double-walled structure using the latest technology and highest quality materials possible in the construction of high-end loudspeakers. The internal chamber is composed of strong MDF plates in combination with complex interior reinforcements of 25mm. The outside housing is fully isolated by an insulation layer so that all emitted frequencies are absorbed from the inside. Felt-like mats of varying thickness are used for damping on the inside of the speaker wall. These mats are applied in various thicknesses that are accurately computed and strategically placed throughout the inner housing of the speaker as to insure the best resonance. This unique technique characterised by Burmester Audiosysteme makes their speakers outrageously fast and precise. Limiting the amount of the absorption in the base chassis allows the base frequencies to realise their fullness even at lower volume levels. The frequency switch of the B100 is arranged with extremely low-loss construction units and works exclusively with phase-ridge filters of the highest quality. We are able to create long-term stability by using high-quality foil capacitors and tin capacitors rather than using low-grade ELKOs. The loudspeaker clamps are invisibly attached at the bottom of the loudspeaker. The frequency switch is set in a way that permits BiAmping and Bwiring. One of our greatest achievements in creating the B100 was devising a as low as possible impedance switch so that that excess power generated from the amplifiers can be channelled and utilized throughout all the individual speaker compartments.

Thus resulting in optimal control throughout the individual loudspeaker chassis. As such, the base coil was developed to have only 0.02 ohms. The frequency switch plates were coated with 150µm copper and the connection to the bass chassis is with a 10qmm cable made from the purest copper. The midrange and tweeters are connected to their respective frequency switch using the new Burmester pure silver loudspeaker cable. The external housing panels of the B100 are interchangeable with three standard finishes. 3 WHAT IS SO SPECIAL ABOUT BURMESTER LOUDSPEAKERS. ART FOR THE EAR Music unchained from the speaker Combined with a perfectly tuned system of high-quality electronics and top-notch cables our loudspeakers are capable of filling a whole room with music, whereby the music doesn't seem to emanate from the speakers but, instead, to be performed live in the room. Loudspeakers applauded by musicians Musicians are critical listeners because they compare the sound of a stereo system with the original sound of the instruments. In their judgement our speakers seem to virtually explode with music when fed material like large orchestras. Yet, even then they let single instruments shine through with substance and authority. Loudspeakers that reproduce all octaves Despite their comparatively still

moderate size our loudspeakers reproduce all octaves down to the deepest bass foundation. Particularly the bass output is indispensable for bringing across the power and the goose bump impact of great music. Loudspeakers for quiet listening Often, one likes to listen to music late at night to pleasantly conclude the day. At that time, most people will no longer be able to listen to high volume levels approximating the original performance. Our loudspeakers are designed in such a way that even at low listening levels the music will not lose naturalness and and correct tonal balance.

Loudspeakers for fullvolume listening As a musician, Dieter Burmester enjoys the thrill of listening to music at full volume. With our loudspeakers it is possible to listen to very loud music without loss of precision and tonality and without strain. Loudspeakers built with attention to detail A superior concept requires corresponding care in its execution. Every single driver, custom made to our specifications, is burnt in by us before their technical parameters are measured. Only then are they computermatched in pairs to very tight tolerances. This procedure guarantees mating tolerances between speakers so low as to be considered impossible to reach until now. Since we save all technical specifications each driver can be replaced with an identical driver should this become necessary. Loudspeaker with an attractive appearance Loudspeakers should not only sound good but also be easy on the eyes. They should be an addition, not a subtraction, to the living environment. This requires perfect design and highestquality materials. THE DRIVERS 275mm custom designed woofer Custombuilt with 275mm diecast light alloy enclosure, very rigid, magnetically nonconductive, therefore, no magnetical loss Large vent hole in the pole core to vent the area behind the dustcap. Vented dustcap behind the centring bell avoids compression effects. Extremely rigid airdried glass fiber cone with resonancedamping coating, extremely stable and distortionresistant, completely resonancefree response characteristic exceeding 2000 Hz. 50 mm Kapton coil frame, extremely heatresistant und completely free of eddycurrent loss. 25 mm highwound magnetic coil responsible for very long linear cone throw, exceeds the travel of most woofer cones of this size by a factor of two, resulting in a dynamic gain of 6dB. 5 135 MM MIDRANGE DRIVER Kevlar midrange driver with extremely high load rating, modified to Burmester specifications.

135 mm diecast light alloy enclosure, very rigid, magnetically nonconductive, therefore, no magnetic loss. Kevlarcone diaphragm presently has the best rigiditytomass ratio of all known diaphragm materials with resonancefree response characteristics exceeding 3000 Hz Aluminum eddy currentfree coil frame, extremely heatresistant. TWEETER Two AMT Air Motion Transformer tweeter modified to Burmester specifications, with horn construction. Diaphragm foil made of highly heatresistant Kapton, therefore, extreme load stability. Diaphragm foils are pairmatched. This results in a very low crossover frequency of 2700 Hz and allows a d Appolito configuration which guarantees very stable and transparent sonic images No compression effects as with dome tweeters Neodym magnets with very high energy density app. 20 times higher than comparable ferrite magnets allow magnets of smaller size and, thus, a more streamlined design. SPECIAL FEATURE COMPUTERMATCHED DRIVERS All drivers are broken in at high signal levels by Burmester Audiosysteme nonstop for seven days woofers and midrange drivers with 10 Hz, tweeters with pink noise. Then they are measured very carefully over their full frequency range and finally matched in pairs by computer. After the computermatching process we guarantee that the overall frequency deviation between left and right speaker is less than 0.5 db! With this procedure we can guarantee the technical specs of the speakers for a long time since they are broken in and, hence, do not change characteristics when used by the customer. 6 CABINET CONSTRUCTION Doublewalled enclosure with extremely rigid inner housing and soft dampened outer enclosure to avoid undesirable resonances at the surface of the speaker cabinet. Bassreflex woofer enclosure 2 x 60 l volume with a lower critical frequency of below 30Hz. Sealed midrange enclosure with volume of 2 x 4 l Symmetrical array of the two midrange drivers above and below the tweeter d Appolito.

Compared with an asymmetrical driver arrangement this configuration delivers a much more stable and precise sonic image. The two woofers are also arranged symmetrically in line with the tweeter to extend the d Appolito concept into the bass region. Cabinet finishes and prices see price list
SPECIAL FEATURES The woofers of the B100 radiate from the side of the speaker cabinet towards each other. This configuration has the advantage that undesirable high frequencies emanating from the woofers partial harmonics do not reach the listener directly. Furthermore, facing the woofer cones towards each other produces an additional compression in the bass region without cancellation effect. Ideally, the distance between the speakers should be at least 2.5 m. DAMPING Bass dampening system at the inside of cabinet walls, no sound deadening wool in the bass enclosure to absorb as little as possible of the backradiating woofer energy. The dampening material consists of special felt. Dampening of the midrange enclosure with a bit of cotton insulation to absorb the sound radiating from the back of the midrange driver. Massive binding posts under the speaker cabinet ensure shortest possible distance to the crossover. Front panel made of solid 20mm thick aluminum plate, milled and enameled. It holds the tweeter and acts as a cabinet stiffener in the area of the tweeter and midrange drivers see fotos.Outstanding innovations and inventions transformed the task of developing optimum sound It breaks with the traditions and sets new standards for sound quality. You Providing the industry with leading sound quality and performance. Just listen and you ll know why Dynaudio monitors Jamo D 7 system It will give its best with high end components. Quite imposing, the A4 retains the finesse Every speaker series we have developed since we started more than 30 Driver 3 Way system with bass reflex woofer and horn loaded mid and high frequency drivers. 20 to 100,000 Hz 96 db 450 w program 16.
