Book Descriptions:

Coolsat 5000 manual download

And by having access to our ebooks online or by storing it on your computer, you have convenient answers with Coolsat 5000 Guide. To get started finding Coolsat 5000 Guide, you are right to find our website which has a comprehensive collection of manuals listed. Our library is the biggest of these that have literally hundreds of thousands of different products represented. I get my most wanted eBook Many thanks If there is a survey it only takes 5 minutes, try any survey which works for you. So th Page 39 and 40 Dishnet Channels with AC3 The follo Page 41 and 42 12326 305 HBOFM 5669 319 SHOW 4645 Thank you, for helping us keep this platform clean. The editors will have a look at it as soon as possible. FTA or freetoair TV channels are distributed without encryption methods and do not require any subscription or activation fees, unlike other types of satellite service. An RS232 port is located on the rear of the Coolsat 5000 Platinum to allow users to program the receiver with the latest software. Step 2 Turn off the Coolsat receiver and unplug it from the power source. Connect the RS232 to USB adapter into one of the ports on your computer and insert the cable into the port on the adapter. Step 3 Plug the other side of the RS232 cable into the port on the rear of the receiver. Turn off the receiver and unplug it from the outlet. Disconnect the RS232 cable from the back of the receiver and turn it back on. I down loaded the manual from the manual section on this forum. However, I have 2 questions that dont appear to be covered in the manual. 1. My new FTA system with the Geosat receiver displays the actual channel numbers. However the Coolsat 5000 displays the channel numbers as 2XXX. As a example on my Geosat a Program is on G19, Channel 257.Why, whats happening and how do I get it to display the correct channels. 2. The Coolsat being a older receiver, the software for satellite positions is not correct for all Satellites since some have been moved since this receiver was made. The manual mentions flashing for current software, but no where does it tell how to reflash. Can anyone point me to instructions on reflashing. Many Thanks 8Valve However the Coolsat 5000 displays the channel numbers as 2XXX. As a example on my Geosat a Program is on G19, Channel 257.

Why, whats happening and how do I get it to display the correct channels.Best thing is to flash with new software The manual mentions flashing for current software, but no where does it tell how to reflash. Many Thanks 8ValveIf you choose, you can dump the channel files, and import them into ChannelMaster by SharpC, SharpC Discussion Forum, and edit the channel names, delete unwanted tps and channels, etc. Itll help you keep the sat names just the way you want them. My preference is to precede each sat name with its position, ex 97W Gal19 Ku. You can choose whatever system fits your mood. When Ive tried it before, I never can seem to get it to download the new files to the stb. I have the correct null modem cable. Anyone have the step by step instructions Thanks. I forget I did post the loader as an attachment and a link to the sowftare Enjoy it my friend, it is a very nice receiver! RADAR It took me that long to zip and load it and you got there before me. Never the less, the Coolsat 5K and 6K are excellent little STBs. I love them and still continue to use them even though I have an AZBox in my lineup. You just cannot beat a Coolsat 5K for standard DVBS use. You made a good decision to buy one, you wont regret it. Sure, things are changing, but these boxes still function and they are a great box for beginners to start out with as well as seasoned veterans. They are friendly to use and work exceptionally well! RADAR If you want to transfer files between two Coolsat receivers like cloning one coolsat channel list to another, then you need the null modem cable so that they can handshake properly. RADAR Computers are not my strong area LOL Thank

You 8Valve Im pretty sure I have a straight thru cable around somewhere. This took care of the strange channel numbering I described in my first post. Here is the receiver info after the firmware update; Coolsat 5000 Platinum SW Version 0.05 dec 17, 2009 HW version 1.10 Boot Version 2.

<https://www.projectorrentals.com/wp-content/plugins/formcraft/file-upload/server/content/files/16285817240db6---buy-manual-boost-controller.pdf>

10 0914 CH version June 14 2009 My next quest was to load the new and current satellites. I downloaded the Channel master.zip I need help, have no idea what to do with it after I unzipped. The only executable file is STbce.exe. Please walk me through updating the Sat List. Now, one final question.I hope.LOL ! This Coolsat will be in my Shop hooked to my 12 foot Paraclisp, with Corotor and C and KU LNBS The system in my house is a Geosat 200 using USALS to drive the dish motor. If I return my dish to ZERO. My Present KU and C band LNBS on the BUD are Echostar. Does anyone know the LO frequency to set the receiver to when I start searching for Sats in the shop on the BUD. My Sincere thanks 8Valve The Receiver; Coolsat 5000 Platinum Black Case Serial CST28S0060428182 Have no idea of the Date it was built Thanks 8Valve However it did not solve my problem. A few weeks ago, when I got the Coolsat from Ebay the Channel Numbers displayed as 2XXX. For example, I always use the TV Preacher Dr Scott since the 1980s as he is like the north star, always there. My brand new Geosat Channel numbers start at 100. Gene Scott is on G19, channel 257. On the Coolsat he was on channel 2140. One poster suggested that the Coolsat might have some hackerware in it and suggested to reflash the firmware. Everything changed, but not for the good. Now the Coolsat channel numbers start at 1. Gene Scott is now on channel 60. Here is something I find interesting, but dont understand what it means. Doing a Info on my Geosat 200, on G19 Gene Scott I see Channel 257, 12115V, 22425. On the Coolsat 5000 I see Channel 60, 12113V, 22426. Does anyone have a idea what is happening with the Coolsat 5000 and how to make it read the channel numbers correctly. Other that this issue, it works great, super picture on my 12 foot paraclispe in the shop. Thank You 8Valve As example on my CS5000 I started with 72W and scanned the arc going west. On my Pansat 1500 in the other room I dont have all the sats scanned in.

www.demirdokumservisiankara.com/image/files/a-falconry-manual-by-frank-beebe.pdf

So Doc Scott may show as channel 80 on the 5000 but channel 20 on the Pansat. Login to post Thank You The code will be in your URC, if it is compatible.RegardsPhilips The last one is 1.36 but is not currently working as you know. BTW, I do not think you will find that bin in here. Sorry.Thank You I have 3 blink fast and 1 blink slow on my power led on front. It indicated problems with the main cpu It just started recently and I'm worried about buying a new tv Today I just able to get a picture at all by wiggling the lvds cable from the main board to the tcon. I tried wiggling and reseating all ribbon cables. When you disconnect any ribbon from the tcon to the screen the whole screen goes out.Answer questions, earn points and help others.
