 review Read less Verified purchase Yes by donnasworld August 07, 2012 Great inexpensive player. I
 have purchased this product before. Creative Muvo no longer produces it, so it is great to be able to
 find one. I also have a 1G and a 512MG. I use it, with the armband, when I run or lift
 weights. <http://goforthegreengolfpools.com/userfiles/ford-new-holland-manuals.xml>

Its not expensive enough that I have to fret about it, and the selection being played can be changed
 with literally a flick of my thumb great while running. I also use it while commuting. Its great. I will
 never spring for somthing so expensive as an Ipod. I see people standing around with them and I am
 mystified. They are forever staring at their screens. I never have to stop what I am doing to change
 songs or stations. A brilliant product.brilliant product. Id buy it again just to get a spare.. Read full

review Read less Verified purchase No by raybayraybay January 17, 2012 Awesome great value, separate battery, easy to use, voice recording great This is a great product. I went looking for it on ebay because you cant find it new anymore. I love the design. Its easy to use and if you run out of battery power, you can just buy a new battery and keep going. Most MP3 players now must be charged with a USB connection. So if you dont have some kind of cord to charge it and a power source, youre out of luck. This is why I still like having a separate battery. Also, who knows when the built in batteries in the newer models will finally fail! This thing has everything you need. The interface is not fancy and it can take a while to skip through tracks, but I just put it on shuffle and go without looking at it. The recorder is also great. The files stay small because the resolution is low as it should be for voice recordings and you can record for over an hour. I use this for a daily audio diary, much faster and simpler than writing and captures more. If the battery dies during a recording, it saves up to the sec before the battery died very useful. Creative can you hear me I wish you kept making this model!!!. Read full review Read less Verified purchase No by girlstamping October 20, 2006 Love it. This thing is so easy to use that weve bought 2 off of Ebay now.

Ive never used any other mp3 player so I cannot compare it to anything else, but the sound is great, it never shakes even when you are active. The AAA battery last for a long time. I did not use the software that comes with it. You can simply copy your music files to the external drive mp3 player and youre ready to go. You can listen to your list in order or shuffled. I dont think you can move them once you get them on there so if you want a certain order, put them on that way!. Read full review Read less Verified purchase No by kirkevarer December 06, 2005 Another good product from creative. The good Nice design with lot of toys fm player, voice recorder and pretty good design. Battery life is amazing about 15 hours on 1 normal AAA cell. This player have an intergrated USB jack that you can plug into any usb port so data transfer cant be anymore simpler.,, The bad very delicate My player actually broken apart from numbers of fall on hardwood floor. The problem was easily solved by some glue, but the unit shells occasionally still fall off. Which, to my dismay, limited it used for me to transfer work data from the mac at work to my pc at home.,, The ugly again, carefully handling of this unit is a requirement. Plus, the LCD provides full track information ID3 tags and is great for folder navigation with the convenient scroll button. TX FM is equipped with superfast USB 2.0 that transfers music or data files in blazing speed to and from your computer. The size of a small USB flash memory drive, the MuVo TX FM weighs just 1.1 ounces with the single AAA battery inserted into the battery pack. This multiformat player is compatible with both MP3 and WMA files, and it also includes an FM tuner and the capability to record music directly from the radio. It also includes a builtin microphone for recording short voice notes or long lectures. You can also use the MuVo TX FM as a mass storage USB drive, enabling you to carry important documents and presentations.

The 512 MB internal flash memory will store up to 16 hours of WMA files at 64 kbps or up to eight hours of MP3 music at 128 kbps; it will also store up to 32 hours of voice recordings. With support for WMA, MuVo Micro N200 offers you access to the widest selection of music download services on the Internet, including Best Buy MusicNow, Buy Music, Musicmatch, and Napster. The Creative MuVo TX FM plugs directly into your computer's USB port. It's powered by one AAA battery that provides up to 15 hours of continuous play. With superfast USB 2.0 connectivity and simple drag-and-drop transfer without software, the MuVo TX FM accepts music files as quickly as a song per second. The 96 x 32 pixel blue backlit LCD displays file information, and you can scroll through folders, playlists, or individual songs. You can customize playback with a five-band graphic equalizer with four equalization presets, as well as environmental settings for pop, rock, jazz, or classical. What's in the Box This package includes the 512 MB MuVo TX FM digital audio player, earbuds, 15-inch velcro armband, carrying case with belt clip, and CD-ROM with Creative MediaSource music management software. MediaSource is an easy-to-use application for ripping CDs, organizing entire digital music collections, and easily transferring MP3 and WMA files. Choose your music. Choose your device. Know it's going to work. Compatible with PlaysForSure. Look for the PlaysForSure logo if you're shopping for a portable music or video device and you want to make sure the digital music and video you purchase will play back on it every time. Match the PlaysForSure logo on a large

selection of leading devices and online music stores. If you see the logo, you'll know your digital music will play for sure. The PlaysForSure logo makes it easy to find digital media stores and devices that work together.

Choose from a large number of digital music and video stores, including CinemaNow, MSN Music, Musicmatch, MusicNow, Napster, WalMart Music Downloads, and many more. Look for the PlaysForSure logo on a wide variety of devices, including portable music devices, portable video devices, digital audio receivers, Pocket PCs, and Smartphones. The checkmarks indicate if the device is capable of playing back audio and video that's been downloaded from an online store. Additionally, some devices can play back media that has been purchased through an online store that offers subscriptions or rentals. Para calcular la calificación general por estrellas y el desglose porcentual por estrellas, no usamos un promedio simple. Nuestro sistema toma en cuenta cosas como lo reciente que es una calificación y si el revisor compró el producto en Amazon. También analiza las calificaciones para verificar su fiabilidad. Vuelva a intentarlo en otro momento. I was copying MP3s onto the device, and playing them, within 5 minutes of unpacking. I'll also point out that I only have USB 1.0 ports on the system I am using right now, and the transfer speed was still very manageable. About 8 minutes to copy the entire 512 megs, around 1 minute for a single album. As several people say, the earbuds are so so. The belt clip is really nice, and the armband is cool. Although, as a bigger guy, it might be a little snug if you wanted to wear it on the upper arm. The display is great with a nice blue backlight, and the interface is very intuitive. The FM reception is great. It's much easier to let it autoscanner and assign all the stations to presets. If you try scanning around on your own without doing this, good luck. The voice recorder works fine, and I have already tried running the output to my car stereo. All you need is a little two-ended cable if you have a line in on your car CD player, and it sounds great.

I'm no audiophile, but at least at a casual listen, the sound quality was the same to me as a CD in the player. The software is OK. You can import an external playlist, and it will transfer a playlist to the player, which is cool. It does seem to take a while to import tracks, and it would be nice if the autoplaylist had a little more control. Overall, I'm very pleased with the device. I have a couple friends who already owned them, and they are also very happy. Bottom line, why pay the same money for an IPOD shuffle with no display!! FM radio, and you can record it. NO CABLES to fumble with or lose or misplace. So much that I bought a Muvo 128 on sale somewhere for my son to use. Then, I bought the Muvo FM 1 Gb to get more room and then bought the 512 when I saw it on sale as a backup. Only 1 drawback I can see, the sound isn't as loud as I would wish it to be, but hey. It's only got 1 itty bitty AAA battery. PS The included earbuds stink. Most of them do. Get a pair of Sony's fontopia sp and you really see the sound the Muvos can put out. I love the FM broadcasting, wish it

had AM radio as well since I like to listen to sportscasts, the next evolution probably would be an XM version. The 512mb is good for the average user and the media player also acts as an additional temporary USB storage device you can store documents and files to transfer as well as regular music media files. My only recommendation to improve the product is possibly Creative can provide a player in a sturdier case since the plastic is very light weight and gives a impression it is easy to break. I just got it today and i can put 110 songs onto it. Thats a mix of MP3s and WMAs more mp3s. Plenty of music! Now lets see, does an iPod have an included arm band NO. A protective case with belt clip NO. Voice recorder NO. Radio NO. Flash drive NO. 1 AAA battery instead of a rechargeable battery that runs down after time NO. Sure, I have less space, but if you need more space, get the 1gig version of this player.

I dont see whats so special about iPods, I think its just the new trend. The only downside of this player No clock I guess a clock could be nice. Overall I LOVE THIS PLAYER and will cherish it for a LONG TIME. One reason is that the iPod holds so much more. Another is that the iPods battery really lasts a long time whereas with this device the battery has to be frequently changed. A third is the superior interface and controls on the iPod. The original advantage of the MuVo was lost when iPod introduced the solid state Nano. The player stopped working after less than a month. Creative sent me instructions to download new software, which I did wasted an afternoon, and it still did not work. I emailed them, but with little hope, given the reviews I just saw on Amazon. It seems like they intentionally put defective products on the market with no concern for their reputation, which used to be good and is now going downhill. Do not buy this product. Save yourself a headache. There must be a better use for your money than throwing it down the drain, which is what youd be doing if you purchased this MP3 player. Even after downloading the detailed instructions, I found the directions inadequate. An error message I got was not explanatory. I admit I am a novice with MP3 players, but I have used computers in my work for over a decade and I have an advanced degree. Finally, it was a little annoying to see the price had dropped significantly from the time I ordered it until now. Most models in the MuVo range use flash memory for storing data; the only exceptions being the MuVo. The smaller part functions as the audio player, bearing all of the controls, inputs and outputs, internal microphone, and a male USBA plug. The larger part has a female USBA receptacle, and holds one AAA battery this provides power to the player. However, players like the MuVo, MuVo FM, MuVo XT, MuVo Slim, and the MuVo Vidz are an exception. The MuVo N200 looks like a typical MuVo player, but the two unequal parts are merged and inseparable. Many, but not all, models also include an internal microphone allowing the device to be used as a lowquality audio recorder. The MuVo line was discontinued in 2009. By using this site, you agree to the Terms of Use and Privacy Policy. The company has made several improvements to its latest MuVo, the TX FM. The player adds an FM tuner, comes in a choice of four capacities 128MB, 256MB, 512MB, and 1GB, and offers a faster filetransfer speed USB 2.0, though it still has the tiniest of LCD screens. The player offers a similar control layout to that of the MuVo NX, but the TX FM has slightly different coloring white and black as opposed to grey and black. It lacks the snazzy red spare battery module that was included with the NX, and the USB extender cable, a handy extra for those with overcrowded or

inconveniently located USB ports, is also notably absent. On the upside, Creative now provides a cleverly designed holster that can clip to your belt or to the included armbandan ideal accessory for working out, jogging, or even just walking around. There's also an eye hook if you prefer to use a lanyard. It shows basic ID3tag info, elapsed time, playback settings such as shuffle and repeat, and a battery gauge. Both players can record low-quality mono voice memos and offer the standard MuVo five-band equalizer, which has Rock, Pop, Jazz, and Classical presets, plus a user-defined mode.

However, with the TX FM, if you tire of digital tunes, you can turn on the FM radio. The player can automatically scan for available stations and create up to 32 presets from the ones it finds. There's also the option to record radio, which the MuVo does in 4-bit stereo; this isn't great for music but fine for, say, an NPR show you want to hear later. Unfortunately, there's no way to set up timed recordings, TiVo style. You can either drag and drop files in Windows Explorer or use Creative's surprisingly good MediaSource application to create playlists, rip CDs, and copy files. As with other MuVos we've tested, the TX FM's 90dB signal-to-noise ratio resulted in clean, full audio playback. But you'll probably want to ditch Creative's flat-sounding, foam-padded earbuds.
